SUMMARY

Backend developer with 4+ years of hands-on experience building and maintaining production PHP / Laravel applications, REST APIs, and large-scale e-commerce platforms. Proven track record integrating payment, shipping, and tax APIs, resolving critical security and payment-flow issues, and delivering performant backends that serve thousands of users. Comfortable across the stack — from API design and database tuning to VPS deployment, Redis-backed queues, and production monitoring.

TECHNICAL SKILLS

Backend: PHP, Laravel, REST API design, Laravel Horizon, queue workers, Supervisor, Cron / scheduled jobs
Databases: MySQL (tuning & optimization), PostgreSQL, Redis
Frontend: HTML, CSS, JavaScript, Bootstrap, Tailwind CSS, jQuery
DevOps & Hosting: Hostinger VPS, Nginx, Docker (basics), AWS (basics), Cloudflare, deployment & server tuning
Monitoring: Laravel Pulse, Nightwatch, Sentry, slow-query analysis, load testing
Tools & Workflow: Git, GitHub, Bitbucket, Jira, Trello, Agile

PROFESSIONAL EXPERIENCE

Backend Developer — Malahi Time2026 – Present
Mobile ticketing & entertainment platform

- Designed and developed the REST API consumed by the Android & iOS apps — ticket purchase, branch & offer management, QR-code validation, and multi-role access (end-user, branch operator, provider admin).
- Integrated payment gateways and built secure, anti-replay ticket-redemption flows protecting live customer transactions.
- Optimized API performance with Redis caching, Laravel Horizon queues, and database/query tuning — sustaining sub-second response times while handling [add peak load: e.g. bookings/day or concurrent users].
- Set up and maintained production infrastructure on Hostinger VPS across multiple subdomains: Nginx, Supervisor-managed queue workers, SSL/TLS renewals, and centralized monitoring (Laravel Nightwatch / Pulse / Sentry) for slow queries, failed jobs, and exceptions.

Backend Developer — NuminixFeb 2023 – 2025
Canada · Remote — production e-commerce stores for North American clients

- Fixed critical payment-flow bugs and security vulnerabilities in checkout, protecting live customer transactions and reducing fraud risk.
- Integrated shipping providers (FedEx, USPS) for accurate rates, label generation, and tracking.
- Integrated US sales-tax APIs (TaxCloud, TaxJar) to ensure full compliance across states.
- Implemented Google reCAPTCHA and anti-abuse measures to reduce spam, fake registrations, and carding attempts.
- Shipped new storefront and admin features, refactored legacy code, and improved the reliability of long-running production stores.
- Collaborated with PMs, designers, and front-end developers to deliver releases on schedule across multiple time zones.

Backend Developer — ProleadersMay 2022 – Aug 2022
Cairo, Egypt — ERP system for an online-courses business

- Added new modules and features to the existing ERP to support evolving course-management and student-operations workflows.
- Built custom reports (sales, enrollments, operational KPIs) used by leadership for decision-making.
- Resolved bugs and improved data consistency across reporting and admin modules.

SELECTED PROJECTS

Al-Haytham Arabic Language Platform — *Freelance · End-to-end build & operation*
Production educational platform for Arabic-language courses, designed, built, and operated end-to-end. Serves ~1,900 active users with strong response-time performance on a single VPS. Full course / lesson / student management with progress tracking and certificate issuance, subscription billing with automated invoicing, and video access controls. Laravel + MySQL + Redis on Hostinger VPS with Supervisor-managed queue workers and Cloudflare.

E-Commerce Platform — *Graduation Project*
Full e-commerce platform for a student marketplace: product management, secure payment-gateway integration, role-based accounts (students / admins / vendors), real-time order tracking, and an analytics dashboard.

Stack Overflow MVC Clone — *Native PHP*
Q&A site for developers built from scratch in native PHP using MVC and Front Controller patterns — no framework — to demonstrate clean architecture and routing fundamentals.

EDUCATION

Bachelor's in Computer Science — Kafrelsheikh University, Egypt
Faculty of Computers and Information · Software Engineering specialization
